**Marquise Technologies to introduce Light O C E A N at NAB 2011**

*Geneva, Switzerland* – Marquise Technologies announced today that they have extended O C E A N telecine controller product range with Light O C E A N.

This simplified version of the fully featured O C E A N universal controller is a remote control for the telecine features, designed for traditional film to tape workflows, with one light and best light transfers capability. Proposed at an extraordinarily low price, this turn-key solution is of course fully flexible and can subsequently be upgraded with the digital grading functionalities and the data-cine capabilities of O C E A N.

Laurence Stoll, CEO of Marquise Technologies comments: “flexibility and upgradability are actually key words for our products, and it was really important to answer our customer’s requests with this more than affordable solution, while still maintaining the quality and efficiency for simple transfers”.

Light O C E A N, unlike other controllers, displays the live image from the telecine directly in the user interface for a maximum comfort while working with the color correction controls.

Light O C E A N controls the typical telecine features:

- Primary and Secondary Grading
- Pan & Scan, Zoom, Focus
- PECs
- Aperture controls
- Masking

The features supported by Light OCEAN depend on the telecine type. Please ask the telecine manufacturer or contact Marquise Technologies for the full list of supported features.

O C E A N offers total control for Cintel Millennium HD, DSX / C-Reality and URSA, for DFT Spirit Data-Cine and Shadow Telecine, as well as for Sondor Altra.

It will be showcased on Marquise Technologies booth at NAB controlling an Altra 16/35mm SD/HD telecine.

**To visit Marquise Technologies at NAB 2011:**

**South Hall – booth SL 7607**
